LA1525SD

25W Ultra Directional Speaker

LA1525SD  
25W Ultra Directional Speaker

MP1525  
25W Mixer Amplifier

The LA1525SD hyper directional speaker can deliver a narrow beam of sound to a desired area while preserving silence around it, or allowing the co-existence of different sounds in the same space without mixing or interfering. The audio-beam created by LA1525SD can cut through noisy environments and deliver a headphone-like experience for the listener.

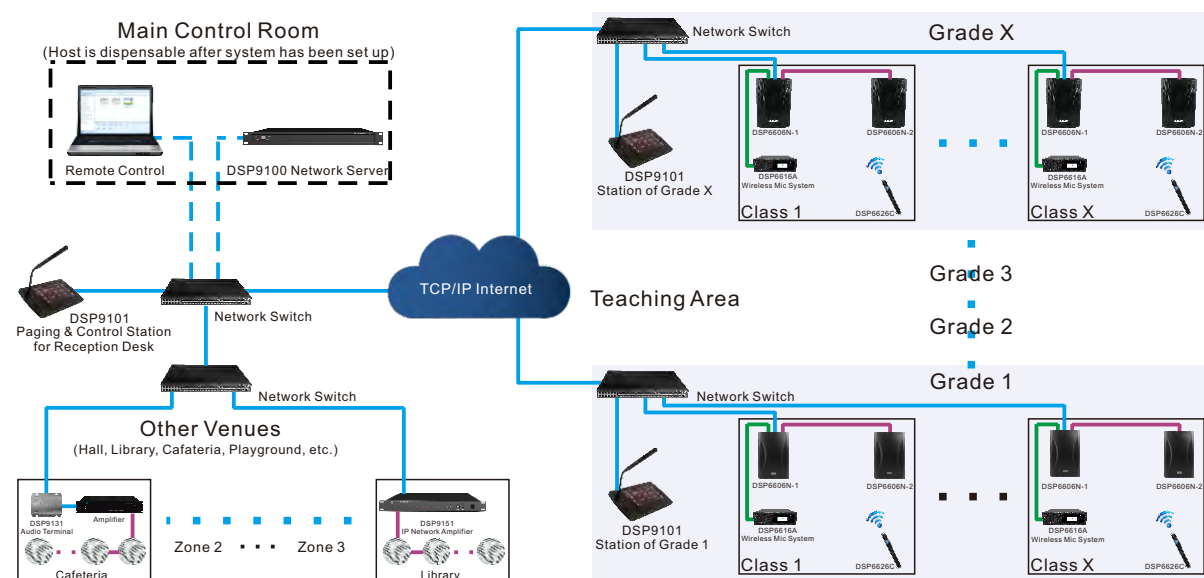

The LA1525SD speaker offers highly directional distribution of sound, which is reproduced clearly – without distortion – even at high volumes. The speaker itself is easy to use – you only need to connect the audio output of your source device (such as portable music player, laptop, DVD-player etc.) with the speaker and you are ready to go.

The LA1525SD hyper directional speaker can be mounted and used in three modes: Spotlight Mode, Virtual Speaker Mode and Sound Shower Mode.

## Dante Network System

### Dante Technology

Based on industry standards, Audinate created Dante, an uncompressed, multi-channel digital media networking technology, with near-zero latency and synchronization. Dante is the preferred audio networking solution that has been adopted by more pro-audio AV manufacturers than any other networking technology. Interoperability is not a dream of the future, but a reality today. Hundreds of Dante-enabled products are available from the world's leading manufacturers, enabling you to mix devices from multiple manufacturers.

### Economical and Versatile

One cable does it all. Dante does away with heavy, expensive analog or multicore cabling, replacing it with low-cost, easily-available CAT5e, CAT6, or fiber optic cable for a simple, lightweight, and economical solution. Dante integrates media and control for your entire system over a single, standard IP network.

### Outstanding Quality

Since audio is transmitted digitally, you don't have to worry about the common analogue challenges of interference from other electrical equipment, crosstalk between cables, or signal degradation over long cable runs.

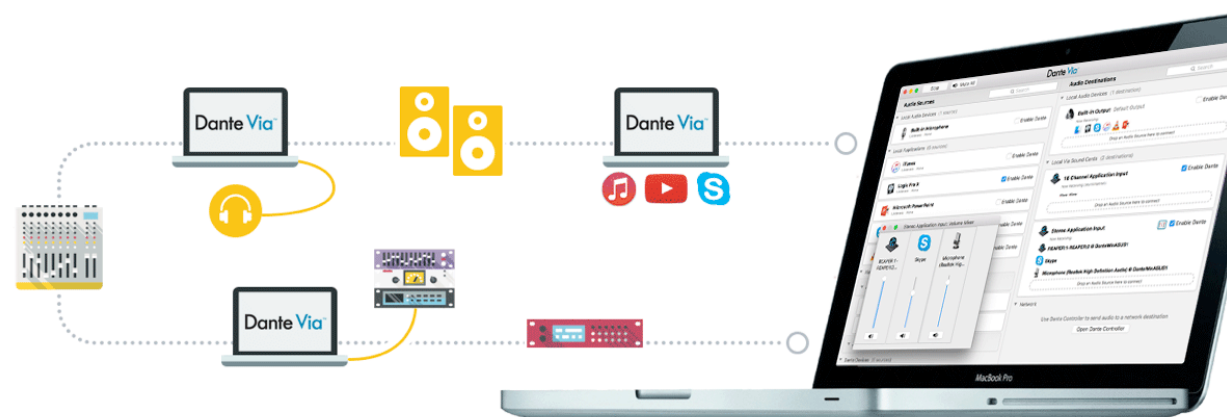

### Easy To Install, Easy to Use

Signal routing and system configuration with Dante is fast, simple, and incredibly flexible. Dante Controller is a powerful software application that manages devices on the network. Setting up a Dante network is typically just a matter of plugging devices into an Ethernet switch and connecting a computer to the network. All Dante devices are automatically discovered and displayed in Dante Controller, so you can be up and running in seconds.

With Dante Controller you can easily edit device names and channel labels, control sample rates, and set device latencies. There is no longer any need to remember device IDs or channel numbers.

### Advantage

Comparing to the first-generation audio over Ethernet technologies, such as CobraNet and EtherSound, Dante provides specific advantages, including native gigabit support, higher channel count, lower latency, and automatic configuration.

# EN54

## EN 54 Standards

The EN 54 Fire detection and fire alarm system is a mandatory standard of European Union market that specifies requirements and laboratory test for every component of fire detection and fire alarm system.

The standard developed and approved by European Committee for Standardization (CEN, French: Comité Européen de Normalisation). It came into force in April 2011. It has been widely recognized around the world. Three sections regarding to Voice Evacuation Systems in the standard:

### EN 54-4

EN 54-4: Power supply equipment

An uninterrupted monitored power supply system is crucial for this type of system, guaranteeing system availability at all times. Some of the characteristics that have to be fulfilled:

- Monitoring and detecting faults in batteries
- Protecting against surge
- Protection against over discharge

### EN 54-16

EN 54-16: Voice alarm control and indicating equipment

Requirements that the control system must fulfill as well as the tests that have to be undertaken.

Some of the characteristics that have to be fulfilled:

- Immediate availability. It must be able to send warning message 10 seconds after applying electric power supply
- Immediate response. Less than 3 seconds after an alarm is set off
- Supervision of the critical signal route: the alarm system link, the PA system, the amplifiers and the loudspeaker lines. This supervision must not interfere with the normal operation of the system and must be supervised at least every 100 seconds
- Status indication and fault monitoring
- On some occasions a back-up amplifier is compulsory in case there is a problem with one of them

### EN 54-24

EN 54-24: Voice alarms – Loudspeakers

This establishes the requirements that must be fulfilled by the loudspeakers within emergency

evacuation systems. Some of the characteristics that have to be fulfilled:

- Ceramic connector to withstand high temperature
- Thermal fuse
- Fireproof dome
- Fireproof cables

## Voice Evacuation System

The EN 54 Fire detection and fire alarm systems is a mandatory standard of European Union market that specifies requirements and laboratory test for every component of fire detection and fire alarm system.

The requirements related with voice evacuation system including EN54-4 (Power supply equipment), EN 54-16 (Voice alarm control and indicating equipment) and EN 54-24 (Voice alarm loudspeakers).

## EN54 Fireproof Speaker

Ceramic terminal & thermal fuse      Plastic fireproof speaker dome      Steel Fireproof Speaker Dome

#### Features:

- The loudspeaker series DSP3054EN/DSP3154EN/DSP3254EN/DSP3345EN is specifically designed to meet the requirements of EN54-24 that is part of a series of norms concerning voice alarm evacuation in case of fire.
- The speaker's sound is strikingly qualitative in terms of intelligibility and it incorporates a speaker of 6" (16cm) in diameter with a high efficiency and good linearity in frequency response.
- Product with allmetal epoxy coatings and suitable for recessed installation in panels and ceilings. It canbe fitted with three fastening springs, for a sealed installation with panels of varying thickness. Minimal design, it easily fit into different architectural solutions.
- The speaker series is EN54-24:2008 compliant and it is then normalized for use in combination with fire detection systems.
- The housing of connecting cables is protected by a metal junction box, with cable gland PG16 for an optimal clamping of the cables, and finally the connection is made of two distinct ceramic connectors, one for the incoming cable and one for outgoing cable. The external connection of the lines is electrically coupled from the inner one by a safety thermal fuse.
